Last weeks program: Vyvance for ADHD: The Complete Story

Program 17: Neurofeedback Evolution: Guest, Kurt Othmer, EEG Info

Neurofeedback [NFB] Brief History

In the mid-eighties, Siegfried und Susan Othmer founded the company [EEG Spectrum](#) after they had seen that neurofeedback was capable of helping their son, afflicted with ADHD and epilepsy, where other therapies had failed.

Within the next 17 years, under the direction of Dr. Siegfried Othmer, a physicist with a background in aerospace technology, EEG Spectrum became the most successful provider in the range of neurofeedback. Sue Othmer, a brain physiologist, has developed her bipolar training protocols that are well known for their excellent efficacy. Siegfried's models of the global efficacy of neurofeedback, together with Sue's structured and well-documented approach have contributed greatly to the development of this fascinating technology.

In 2002, the Othmers separated from EEG Spectrum; [Kurt Othmer](#) founded the sales and distribution facility [EEG Info](#) in 2003, with the aim of supporting therapists in all aspects of neurofeedback, even after they had purchased neurofeedback equipment.

Agenda for the Program: Kurt will review these questions

Part 1. What is neurofeedback and how does it work? [For more information see this link: <http://www.eeginfo.com/what-is-neurofeedback.htm>]

Part 2. What are the indications for using Neurofeedback with psychological problems? [For more info see this link: <http://www.eeginfo.com/research/>]

Part 3. How do you know if the person is adequately trained?
What do you think about using medication while doing NFB?
Are there any contraindications for the use of NFB?
How can I find a provider? [EEG Info Providers:
<http://directory.eeginfo.com/>]

Part 4. What innovative changes have taken place with EEG Info software? What makes those changes so useful?
